

CONSOLE is a 1024 byte program designed to allow the Sol TERMINAL/COMPUTER to operate as a standard CRT terminal and to provide access to the essential computer capabilities of the Sol. Using CONSOLE, self test and small diagnostic programs can be entered to system memory and executed. This is in addition to providing facilities for of correct system operation helps in finding errors in case a malfunction.

In addition, CONSOLE contains standardized entry points for all normal I/O operations. These routines are written with all Sol system software allowing each personality mode in the Sol to be interface with external programs in an almost identical manner.
